

NEW WILDFLOWER LEAFLET AVAILABLE NOW!

We have just published a new 8-page leaflet covering the range of wild flower mixtures which we have available.

The updated leaflet provides all the information about the eight AWF mixtures we can supply along with the very popular Cornfield Annual blend. It is, of course, very important to follow some basic management guidelines to ensure that each mixture delivers the best possible results in the field. The new leaflet provides all the appropriate management guidelines and the pictures highlighted in this new publication show how effective wild flowers can be in improving the countryside.

The leaflet explains that wild flowers provide a rich, colourful and diverse ecological habitat for many insects and wildlife. They can be sown in many locations such as parks, gardens and landscaped areas; golf courses; alongside roadways; and on agricultural land.

Hard copies of the leaflet can be sent to your address (please e-mail your contact details including a post-code to info@limagrain.co.uk) or you can download a pdf file from the amenity section of our website (www.limagrain.co.uk/amenity).
