

SEED TESTING SERVICES

A wide range of tests (including germination, purity and moisture) can be undertaken on most crops at our Licensed Seed Testing Station at Witham St Hughs. These tests, which are available to merchants or individual farmers, may be required for statutory requirements (eg in relation to seed certification) or for other purposes.

Below we have listed the main services which we can offer at the current time. Please contact us for more details on the fees charged for specific tests and for more information on the weight of the samples that need to be submitted for the specific tests that you require.

CEREALS

- Purity
- Germination
- Other Seed Count
