# EQUESTRIAN MIXTURES

Our popular range of Equestrian Mixtures has been extensively revised and several significant advances have been made including an improved herb mix and the introduction of a special 'horse-hay' mixture.

All our mixtures (which are packed in 10 kilo bags) have been specifically formulated after extensive consultation with Equine Nutritionists. They therefore avoid high sugar grasses, popular in agriculture, because they can increase the risk of Laminitis in horses and induce "stroppy" temperaments in mares.

The requirement in a mixture can vary depending on the type of horse involved and these mixtures cover the range of requirements we have had over the years from racing gallops to pony paddocks.

## HORSE Paddock MIXTURE

7%	VNS	Smooth Stalked Meadowgrass
14%	Franklin	Creeping Red Fescue
17%	Erecta	Timothy
23%	Denver	Late Perennial Ryegrass
27%	Cancan	Late Perennial Ryegrass
12%	Herbie	Late Perennial Ryegrass
100%		

This mixture has been formulated to provide grazing for horses and ponies with intermittent rests from grazing to produce a hay crop. Depending on any herbs present we would recommend the addition of a minimum of 250 grams of mixed herbs per acre (either mixed with the grass or preferably sown in strips in the sward) to improve the nutritional aspects of the sward.

The mixture is designed to perform well with moderate inputs of nitrogen, but a good application before closing off for hay will produce the best results.

All Natural Seed - Sow at 10-15 kgs per acre

## EQUIPaddock MIXTURE

15%	Sherwood	Early Perennial Ryegrass
30%	Laguna	Mid-season Perennial Ryegrass
23%	Herbie	Late Perennial Ryegrass
12%	Erecta	Timothy
4%	VNS	Smooth Stalked Meadowgrass
16%	Franklin	Creeping Red Fescue
100%		

Our "Equipaddock" Horse and Pony Paddock Mixture is available in 1/2 acre plastic buckets - containing 7 kgs of seed.

A slightly amended mixture to our standard Horse Paddock, this handy pack enables you to reseed areas and at the same time leaves you a plastic container that will be useful around your stables.

All Natural Seed - Available in 1/2 acre buckets

## GALLOPS AND SCHOOLING AREA MIXTURE

4%	VNS	Crested Dogstail
20%	Dawson	Slender Creeping Red Fescue
10%	VNS	Smooth Stalked Meadowgrass
10%	Franklin	Creeping Red Fescue
28%	Herbie	Late Perennial Ryegrass
28%	Mondial	Turf Type Perennial Ryegrass
100%		

This mixture is designed to produce a very dense, springy sward, capable of withstanding very heavy wear and is of course also perfectly suited to racecourses and polo pitches.

Naturally the regular maintenance of this area will pay off by ensuring the turf maintains its springy nature.

All Natural Seed - Sow at 20-40 kgs per acre

# EQUESTRIAN MIXTURES

## HAYLAGE MIXTURE

8%	Erecta	Timothy
25%	Prospect	Italian Ryegrass
25%	Davinci	Italian Ryegrass
22%	Mongita	Mid-season Perennial Ryegrass
20%	Hymer	Hybrid Ryegrass
100%		

A short term mixture for the production of quality haylage. High in fibre, but with a good "nose".

All Natural Seed - Sow at 12-15 kgs per acre

## HORSE HAY MIXTURE

10%	Erecta	Timothy
5%	Comtal	Timothy
5%	Pizza	Cocksfoot
5%	Darimo	Meadow Fescue
30%	Herbie	Late Perennial Ryegrass
20%	Foxtrot	Late Perennial Ryegrass
25%	Pastour	Late Perennial Ryegrass
100%		

This mixture is designed to produce high quality horse hay with that special 'nose' that can only come from a good Timothy content. It will also provide useful grazing in the early spring and during late summer and autumn. In winter it should only be grazed lightly if a good hay crop is desired.

All Natural Seed - Sow at 12-15 kgs per acre

## STUD Paddock MIXTURE

6%	VNS	Crested Dogstail
6%	VNS	Smooth Stalked Meadowgrass
15%	Franklin	Creeping Red Fescue
20%	Herbie	Late Perennial Ryegrass
14%	Denver	Late Perennial Ryegrass
14%	Foxtrot	Late Perennial Ryegrass
20%	Mondial	Turf Type Perennial Ryegrass
5%	Equestrian Herb Mixture	
100%		

This mixture is designed to produce a good, well balanced sward especially suitable for mares and their foals. The deep rooted herbs will improve the calcium and phosphorus levels, being two of the more important trace elements so important for the growth and bone development in young horses.

All Natural Seed - Sow at 15-40 kgs per acre

## STALLION Paddock MIXTURE

6%	VNS	Crested Dogstail
10%	Dawson	Slender Creeping Red Fescue
12%	VNS	Smooth Stalked Meadowgrass
12%	Franklin	Creeping Red Fescue
15%	Herbie	Late Perennial Ryegrass
14%	Foxtrot	Late Perennial Ryegrass
28%	Mondial	Turf Type Perennial Ryegrass
3%	Equestrian Herb Mixture	
100%		

The Stallion Paddock mixture is formulated to withstand harder wear whilst still maintaining a dense, springy and nutritious sward. It contains MONDIAL turf type perennial ryegrass, which is rated very well indeed for its wear tolerance and early growth.

All Natural Seed - Sow at 15-40 kgs per acre
